PATIENT INFORMED CONSENT

Island Chiropractic
Dr. Charles Wakeland
330 Webster Street
Batavia, IL 60510

The primary treatment used by doctors of chiropractic is the spinal adjustment. I will use that procedure with you.

The nature of chiropractic adjustments

I will use my hands or a mechanical device a upon your body in such a way as to move your joints. That may cause an audible “pop” or “click,” much as you have experienced when you “crack” your knuckles. You may fee or sense movement.

The material risk inherent in chiropractic adjustment.

As with any health care procedure, there are certain complications that may arise during a chiropractic adjustment. Those complications include: fracture, disc injuries, dislocations and muscle strain, Homer’s syndrome, diaphragmatic paralysis, cervical myelopathy, and costoverebral strains and separations. Some types of manipulations of the neck have been associated with injures to the arteries in the neck leading to or contributing to serious complications, including stroke. Some patients will feel some stiffness or soreness following the first few days of treatment.

The probability of those risks occurring.

Fractures are rare occurrences and generally result from some underlying weakness of the bone, which we check for during the taking of your history and during examination and x-rays. Strokes has been the subject of tremendous disagreement within the profession with one prominent authority saying that there is at most a one-in-a-million chance of such an outcome. Since even that risk should be avoided if possible, we employ test in our examination that are designed to identify if you may be susceptible to that kind of injury. The other complications are also generally described as “rare.”
